

THE BEST POSSIBLE START IN LIFE

PRENATAL +DHA300™ BENEFITS

Easy-to-Swallow Softgel

During the stage of pregnancy, swallowing large capsules or tablets can be a real challenge for many moms-to-be. The Prenatal +DHA300™ delivers the necessary nutrients in a pleasant, easy-to-swallow softgel which goes right down.

B Vitamins

Sourced from bioactive forms, which are better absorbed and far more effective. Since they are body-ready, they don't require complex conversions or mega dosing.

Omega Complex - DHA

Sourced from an algae strain, this vegan source means greater purity. It's also easy to digest.

Calcium

Sourced from natural Aquamin® algae, which is more bioavailable and easier to digest.

Choline

Sourced from Choline Bitartrate and supports healthy brain development. We increased the ingredient concentration to 55 mg.

Lutein

Sourced from FloraGlo®, a natural extract of marigold flowers. This leads to greater absorbability, and it is clinically proven to support eye health.

It is our pleasure to bring to you an updated formula of the most comprehensive prenatal supplement available. Based on cutting-edge research, sound scientific discoveries and the latest knowledge, Prenatal +DHA300™ contains the most advanced and bioactive forms of 26 essential nutrients and minerals +300 mg of DHA. Prenatal +DHA300™ is the result of continuous fine-tuning, and we're proud of the result: formulaic precision whose nutrient profile exceeds in completeness, potency and ingredient quality. Providing your child with the best possible start in life is an investment that pays lifelong dividends.

METHYLFOLATE VS FOLIC ACID

Unlike folic acid, the source Methylfolate (L-5-Methyltetrahydrofolate Calcium from Biofolate®) is body-ready and eliminates the risk of unmetabolized folic acid. This naturally occurring form of folate is required by a large percentage of women due to an MTHFR gene mutation, as these women cannot fully process synthetic folic acid at RDA or higher dose levels. Prenatal +DHA300™ includes 1,000 mcg of methylated folate, which is a higher dose than typical prenatal.

DHA BENEFITS:

The structural fatty acid DHA is crucial for proper eye and central nervous system development, impacting some of the most significant brain functions including vision, cognition and motor function. While DHA is important for everyone, it can be especially vital for babies. Fetuses get DHA while in the womb, and babies could get DHA through their mothers' milk. But, many women do not have enough DHA for themselves, let alone enough DHA for two.

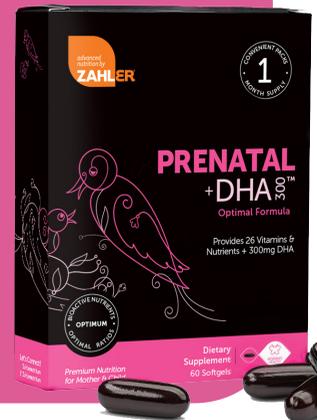

CALLING ON CHROMIUM

Another critical component of Prenatal +DHA300™ is chromium. Many women develop gestational diabetes. This puts them at risk for complications and also affects the developing child. Chromium can help regulate and stabilize maternal glucose levels, thus reducing the risk of developing diabetes during this delicate stage.

Why Prenatal +DHA300™?

The bioavailability of each ingredient is what sets Prenatal +DHA300™ apart from standard prenatal vitamins.

Oftentimes, the sources of vitamins and herbs in supplements are not in the forms that the body can easily digest, and the digestive system is required to perform complex conversions before these nutrients are available for nutritional purposes. Therefore, we go to great lengths to ensure that the Prenatal +DHA300™ contains the most advanced and bioactive forms of essential nutrients and minerals. We source these natural ingredients and bring them to you in their wholesome, purified state, just the way nature intended.

Advanced science in each and every bottle

Using only the purest natural ingredients

Manufactured to the highest standards
